

On Friday we had an incursion about states of matter. The coolest bit was going to all of the tables, one table had magnets, the other had heat, the middle one had ooblek and ice, next to the middle one had x-rays and uv light and the last table had a microscope and materials.

Fizzis insursion

In my first Fizzis insursion, I had LOTS of fun. We learned about sodium chloride which is salt and way more. We did experiments ourselves. We used UV rays, microscopes, energy and magnets.

By Nidhira Jaganth

On Friday, 22nd of May I had my first ever incursion!
The incursion was called Fizzics Education. We learned
about magnets, UV light, heat, materials and chemicals.
We did different experiments like using
microscopes and rainbow glasses! My favourite thing
was when our scientist, Amelia put the liquid
nitrogen which was really cold with boiling hot
water from the kettle into the liquid nitrogen
and it turned into smoke and gases.

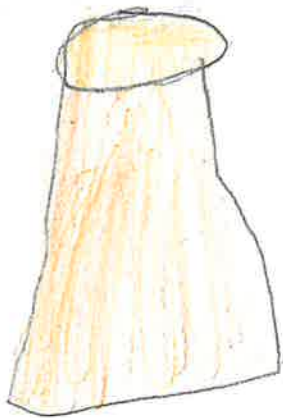

Fizzics Education!
